

Patient's name :- Laxmi Shrestha

Patient's address :- Kadmaha, Saptari, Nepal

Disease's name :- Muscle Strain

Neurobiomarker Testing

Reason :- Muscle strain has occurred due to previous injury.

Treatment's name:- Reduces inflammation: Stem cells help heal pain and stiffness by reducing inflammation in the affected area. Creation of new muscle cells: It helps repair and rebuild damaged muscle fibers. Quick recovery: Artificial stem cell therapy helps rebuild muscles faster as compared to conventional treatments. Prevents fibrosis: Prevents the formation of unnecessary scar tissue in the muscles, thus maintaining flexibility .

Suggested synthetic stem cells:- 311113
