

Patient's name :- Satrudhan Sahani

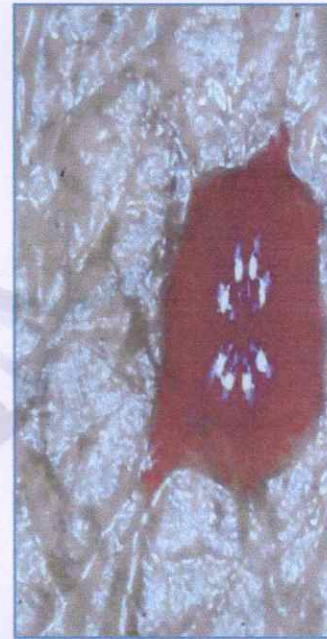

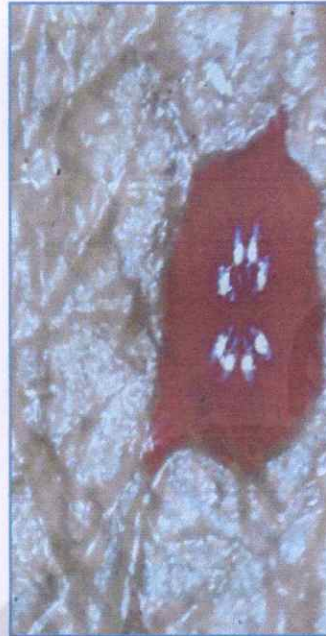

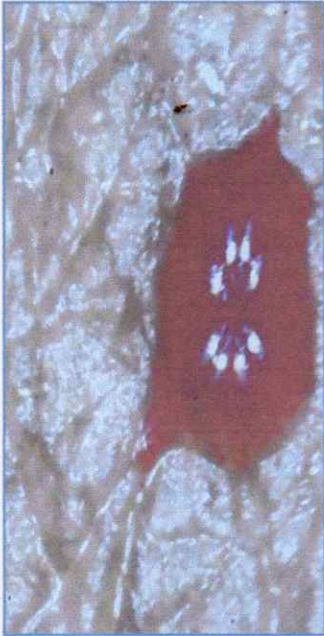

Patient's address :- Lahan 6, Siraha, Nepal

Disease's name :- Allergic Rhinitis

19-Mar-2025

Neurobiomarker Testing

Reason :- Small particles present in dust trigger allergies.

Treatment's name:- Allergic rhinitis is an immune system overreaction problem, with symptoms like nasal irritation, sneezing, blocked or runny nose, itchy eyes and headaches, to dust, pollen, pet dander or any other allergic trigger. Synthetic stem cell therapy can help cure this problem in the following ways: 1. Modulating the immune system- Synthetic stem cells control the activity of immune cells (T-cells, B-cells, macrophages) after entering the body. It can reduce allergic reactions by reducing overreactive immune responses. 2. Anti-inflammatory effects- Stem cells release anti-inflammatory cytokines in the body, which help reduce inflammation and irritation. It can relieve nasal inflammation, blocked nose and sneezing. 3. Tissue repair and regeneration- Stem cells help repair and regenerate damaged mucosal tissue (inner lining of the nose and throat). This restores the functionality of the tissues affected by allergies and reduces sensitivity. 4. Controlling histamine release- In allergic rhinitis, mast cells release excess histamine, which aggravates the symptoms. Stem cell therapy can reduce allergy symptoms by balancing the activity of these cells. 5. Long-term relief- Instead of just suppressing the symptoms like other medicines, stem cell therapy works on the root cause of the allergy. This reduces the chances of recurring allergies and provides long-term relief.

Suggested synthetic stem cells:- 311113
